# CHARACTERIZATION OF BIOMASS ASHES AND INVESTIGATION OF USABILITY

Condition: New. Publisher/Verlag: Scholar's Press | Biomass incineration for the generation of heat and electricity has increased in recent years and this trend is expected to be continued. Ashes as inorganic residues from incineration contain nutrients, but also heavy metals and unburnt carbon. Bottom ashes with low levels of heavy metals are usually used as fertilizers in forests and on fields. Fly ashes are highly contaminated with heavy metals and must therefore be properly disposed of. In view of the...
