

Atherosclerosis of Ascending Aorta and Stroke after Cardiac Surgery

By Bergman, Per

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | A study based on epiaortic ultrasound | Postoperative stroke is a dreaded problem in cardiac surgery and atherosclerosis of the ascending aorta (AAA) is an important risk factor. The risk from calcified AAA, the extent and the topography of the disease in the development of stroke was evaluated. We also determined the most important risk factors for aortic embolization of particles with an intra-aortic filter. Moreover, we studied if conversion from a planned on-pump coronary artery bypass grafting (CABG) to off-pump coronary artery bypass (OPCAB) affected the incidence of postoperative stroke. Furthermore, we investigated if preoperative computer tomography (CT) was comparable with intraoperative epiaortic ultrasound to diagnose AAA. Finally, we evaluated the relationship between the topography of aortic atherosclerosis and the incidence of late stroke after coronary surgery. | Format: Paperback | Language/Sprache: english | 123 gr | 220x150x4 mm | 80 pp.

Reviews

An exceptional publication as well as the font applied was intriguing to learn. It usually does not charge an excessive amount of. Its been designed in an exceedingly basic way and it is just after i finished reading through this book through which in fact altered me, modify the way in my opinion.

-- **Haylee Hackett**

It in a of the best ebook. It generally is not going to expense excessive. It is extremely difficult to leave it before concluding, once you begin to read the book.
