Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1916 Excerpt: .patient from the dark room to test his vision at 6 meters, or infinity, this 1 diopter (artificial myopia) must be subtracted from the +3 D., which would leave +2 D., the amount of the hyperopia. A reference to Fig. 222 will illustrate the description just given. Fig. 221. Figure 221 is the hyperopic eye under examination, and shows the mirror at 1 meter s distance, with the light 5 in. from the mirror. The dotted lines represent the rays proceeding divergently from the eye under examination; the dark lines show the reflected rays from the mirror, which illuminate the retina and have an imaginary focus (dotted lines) beyond the retina. Figure 222 is a profile view showing the hyperopic eye with neutralizing lens in position. The dotted lines2 with arrowheads indicate the direction the rays would naturally take coming from the eye. The lens (+3 D.) in front of the eye is just sufficiently strong to bend these divergent rays and bring them to a focus at 1 meter s distance (artificial point of reversal). In other words, +2 D. of the 3 diopters thus placed before this hyperopic eye would have bent the divergent rays and made them parallel, or emmetropic, but the additional 1 diopter bends the rays still more and brings them to a focus (P.R., point of reversal) at 1 meter. If, now, with the +3 D. before the eye, the observer approaches the eye thus refracted and observes the retinal...
